Human vs Bot Split

Top 10 Countries by Traffic Volume

How Are People Accessing The Site?

Bots Account for 38% of All Traffic: Human traffic accounts for 62% of all 156K requests, with crawlers making up the remaining 38%. The crawler volume is notably high and consistent across all three years, driven by Googlebot (20K requests), Yahoo Slurp (14K)

Nearly 1 in 10 Requests Hit a Dead End: /Darwin/Plant.aspx dominates with 32K hits, confirming the plant catalogue as the site's core feature. However, 9.7% of all requests return a 404 error (nearly 1 in 10) which is critically high. A single broken URL (/darwin/p...) accounts for over 7,100

US & UK Dominate - Mostly Loyal Returners: The US and UK together generate over 35,000 requests, representing the dominant audience. 80% of all traffic arrives directly, suggesting a loyal returning user base rather than search-driven discovery

Average Hides The Problem, P95 Tells The Real Story: Average server response time is 470ms, but the P95 sits at 1,149ms, meaning the slowest 5% of users wait over a second. The 5 worst-performing files are all cache JPEG images
